

The Evolution of Document Capture and Beyond

Do you remember the dark days before OCR? Printed data required manual input, a tedious task that required untold hours of labor and was fraught with errors.

OCR is still an incomplete process. Scanning printed data with reasonable reliability is great for cataloging data, but claims processors need more; more intelligence, more flexibility, more control to make the process truly valuable.

APS listened to your needs and now offers PowerData, an advanced document capture process that uses machine learning to scan, identify and categorize your paper data automatically! The best part is our PowerData process delivers better data that can power your process with amazing accuracy, freeing your time for more important tasks.

What makes PowerData special?

PowerData's AI "reads" your data, just like a human does, understanding the input and giving you control over your data instantly. Here's how the process works:

Your incoming data is scanned. PowerData automatically categorizes the input, enabling APS to apply rules to sort the files and power the automated processing of provider bills and claim data. No humans required!

The system automatically identifies all the data you need: provider name, IDC codes, invoice numbers, claimant information and so much more, straight from the scanned document.

Next, PowerData processes the data, adding metadata. When the system makes a mistake, adjusters can correct PowerData, and the system learns new ways to sort and categorize your data to make the process even more valuable.

EXPLORING YOUR DATA:

PowerData features a complete set of advanced features enabling you to get the most from your data:

Superior Accuracy - Power your processing system with an unmatched level of data and sorting accuracy backed by automated machine learning for maximum value.

Data Delivered Your Way - APS offers multiple options to deliver your data to your process including cloud delivery and direct file transfer into your content management system, along with workflow processes and back-end databases.

Client-Defined Rules for Validation - With PowerData, you're in control with the ability to set custom rules aimed at reducing manual data management and errors. Our simple WYSIWYG (what you see is what you get) model means no coding experience is necessary!

High Speed Service - Our service scans thousands of documents each day to easily keep up with your heaviest data capture needs.

Always Learning - PowerData is always learning from your inputs, making the service more effective and valuable every day!

How PowerData works in Claims Processing

In an effort for maximum efficiency, APS offers end-to-end claims processing solutions, starting with our digital mailroom platform, Centralized Mail Room. Why handle paper mail when we will do it for you faster and cheaper than an in-house model?

When we receive your inbound paper mail at our SOC 2 Type 2 certified facility, APS sorts and scans the documents into the document management process, which is where PowerData leaps into action, giving you secure remote access from anywhere. Our Centralized Mail Room will scan and categorize a wide variety of mail:

- Medical bills
- Invoices
- Prescription fulfillment paperwork
- Medical records
- Daily correspondence
- Insurance claims
- Correspondence
- Patient admission paperwork

The best part is PowerData reduces medical bill processing time and saves you money!

Are you ready to take your claims processing model to the next level?
